Geography Teacher Education

A different view is a key document for those involved in geography teacher education, whether they are PGCE tutors, mentors in schools, or students who are studying to become teachers. It sets out to be 'a re-affirmation of geography's place in the curriculum' and is the most substantial document of its kind produced by the Geographical Association. It should be discussed within all teacher education courses.

Most teacher education courses would encourage students to explore their views of geography and of geographical education at the start of the course. This would be an excellent preliminary activity before engaging with the ideas presented in A different view. This is a document to be examined carefully, to be related to existing understandings and to be discussed. A different view is a document which can stimulate and inform. All those involved in teacher education can develop its ideas further with the aim of supporting geographical education in the coming years.

The seven themes in A different view can be linked to several Think Pieces and Articles in the Teacher Education section of the GA website. The Think Pieces were written to inform, to encourage reflection on a range of themes and issues, and to provide support for tutors planning PGCE sessions. The Think Pieces and Articles relevant to the seven themes of A different view are listed below:
